ABOUT

Backend Software Engineer with around 3 years of experience building scalable SaaS-based distributed systems using Java, Spring Boot, and Kafka. Experienced in designing high-throughput microservices and REST APIs handling large-scale datasets and millions of transactions. Experienced in debugging production issues, optimizing performance, and designing scalable backend systems.

TECHNICAL SKILLS

Languages: Java, C++, C#, JavaScript, Python

Frameworks & Libraries: Spring Boot, REST APIs, React, Microservices

Messaging and Streaming : Apache Kafka (event driven systems)

Databases: PostgreSQL, MySQL, MongoDB(NoSQL)

Caching and Search: Redis, Elastic Search

Cloud & Devops : AWS (EC2, EKS, ECR), Docker, Kubernetes, CI/CD, Git, Jenkins

Core Concepts: OOP, Data Structures & Algorithms, System Design (HLD + LLD), Design Patterns (Factory, Strategy, Singleton), Distributed Systems, Scalability & Fault Tolerance, Concurrency & Multithreading

EXPERIENCE

Cognizant

Software Engineer

Sep 2023- Present

Bengaluru, KA

- Designed and maintained the GTTP enterprise project management platform (Project, Resource, Demand, Dashboard modules) using Java Spring Boot, supporting **500+ global clients** and improving feature delivery speed and UI maintainability by **~40%**.
- Optimized MySQL queries and indexing strategies, reducing query latency by **30%** and ensuring 99.9% availability for customer-facing services.
- Contributed to event-driven architecture using Apache Kafka for asynchronous communication between services, improving scalability, fault tolerance, and data consistency by **~45%**.
- Improved CI/CD pipelines using Jenkins, Docker, and Git by automating build and deployment workflows, reducing deployment time by **~30%** and improving release efficiency.
- Integrated a RAG-based AI assistant using OpenAI API and Pinecone for vector search to provide contextual insights from project, resource, and demand data, reducing manual reporting and analysis effort by **~50%**.
- Resolved 50+ production issues and ensured system stability under peak load conditions, reducing incident resolution time by **30%**.
- Collaborated with cross-functional teams (QA, Product, DevOps) and followed clean coding and modular design practices across 10+ microservices, improving maintainability, system availability (**99.9%**), and release efficiency.

Software Engineer-Intern

Mar 2023-Aug 2023

- Developed backend services and REST APIs using Java Spring Boot with JWT-based authentication.
- Worked on debugging, performance optimization, and feature development in a microservices-based environment.
- Collaborated with team members to build scalable services and improve system reliability and code quality.

PROJECT

CartX

- Architected a Spring Boot microservices system (Product, Cart, Order, AI, Notification) with Spring Cloud API Gateway for routing, authentication, rate limiting, and fault tolerance.
- Enabled secure and efficient data handling using MongoDB (product data) and PostgreSQL (transactional data), along with JWT + OAuth via Spring Security, reducing unauthorised access risks by **~90%**.
- Established communication using OpenFeign for synchronous calls and Apache Kafka for event-driven asynchronous processing across services.
- Deployed applications on AWS using Docker, and developed an AI-powered service using RAG (Chroma DB + Mistral LLM) for semantic search, recommendations, and intelligent query handling.

EDUCATION

Odisha University of Technology and Research

Bachelor of Technology CGPA:9.01

Bhubaneswar, India

Aug 2019-June 2023

CERTIFICATIONS AND ACHIEVMENTS

- Certified in the AWS Cloud Practitioner and in Microsoft Azure Fundamentals (AZ-900).
- Solved 400+ LeetCode and problems, strengthening proficiency in data structures and algorithm.
